Web Development Activity -Based learning

Each Program includes the problem statement, objective, expected output, and main features.

1.**Personal Portfolio Website**

Problem Statement:

Create a personal portfolio website to introduce a student, show education, skills, projects, and contact details. The page should be simple and responsive.

Objective:

To build a basic personal website using semantic HTML sections and CSS styling

Applications of a Personal Portfolio Website :

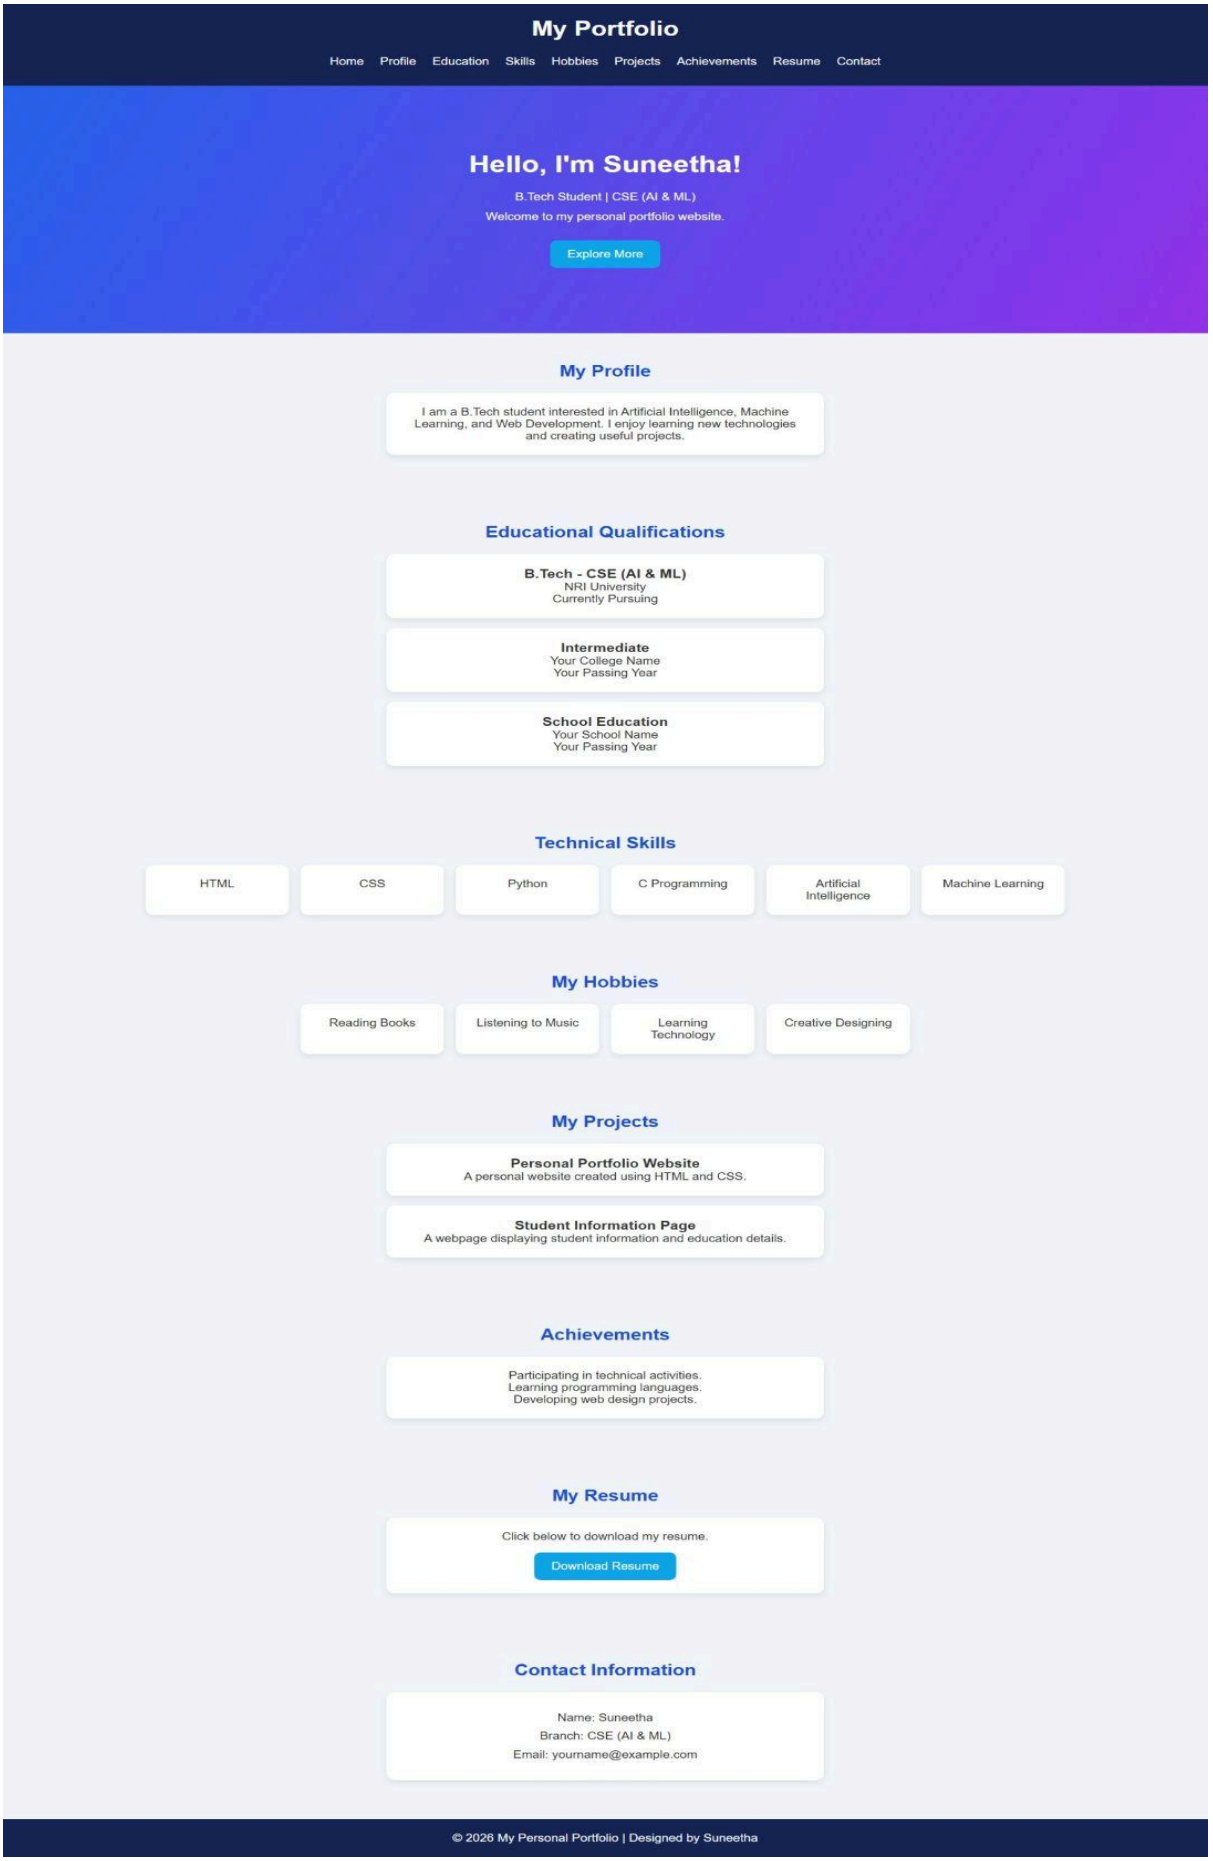

1. Personal Branding: Helps introduce yourself and showcase your talents.
2. Career Opportunities: Helps employers understand your skills and qualifications.
3. Academic Profile: Displays educational qualifications, branch, and academic details.
4. Project Showcase: Presents projects completed during college or personal learning.
5. Skill Presentation: Shows technical skills such as HTML, CSS, Python, and Java.
6. Resume Sharing: Allows visitors to view or download your resume.
7. Achievements Display: Highlights certificates, awards, and accomplishments.
8. Contact Information: Helps teachers, recruiters, and others contact you

Features of a Personal Portfolio Website: .

1. Home Page: Introduces the student with a name and a short description.
2. Profile Section: Displays personal information and a profile photo.
3. Education Section: Shows educational qualifications and academic details.
4. Technical Skills: Lists programming languages and technical knowledge.
5. Hobbies Section: Displays personal interests and hobbies.
6. Projects Section: Showcases completed projects with descriptions.
7. Achievements Section: Displays certificates, awards, and accomplishments.
8. Resume Section: Provides a resume viewing or download option.
9. Contact Section: Includes email and other contact details.
10. Responsive Design: Adjusts the layout to mobile phones, tablets, and computers.
11. CSS Animations: Adds smooth animations and visual effects.
12. Interactive Navigation: Allows users to move easily between sections.
13. Attractive Design: Uses suitable colors, fonts, backgrounds, and layouts.
14. Hover Effects: Changes the appearance of buttons and links when users hover over them.

Output:

Web Development Activity -Based learning

2.Online Food Ordering Website:

Problem Statement:

Create a simple online food menu that displays food items, descriptions, prices, and order buttons so users can browse a restaurant menu.

Objective:

To design a beginner-friendly food ordering interface using HTML and CSS

Applications:

1. Online Food Ordering: Allows customers to select and order food through a website.
2. Restaurant Promotion: Helps restaurants display their food items and prices.
3. Home Delivery: Allows customers to provide their address for food delivery.
4. Time Saving: Reduces the time needed to visit restaurants and order food.
5. Menu Browsing: Helps customers explore different food items in one place.
6. Easy Order Management: Helps customers manage their selected food items before placing an order.
7. Customer Convenience: Allows customers to order food from home or other locations.
8. Food Business Growth: Helps restaurants reach more customers through online services.

Features:

1. Home Page: Displays the website name, welcome message, and Order Now button.
2. Navigation Bar: Provides links to Home, Food Menu, My Cart, and Contact sections.
3. Food Menu: Displays food items such as pizza, burgers, sushi, and noodles.
4. Food Images: Shows pictures of food items to help customers choose.
5. Price Display: Shows the price of each food item in rupees.
6. Add to Cart: Allows customers to add food items to their shopping cart.
7. Quantity Controls: Allows customers to increase or decrease item quantities.
8. Automatic Total Calculation: Calculates the total cost of selected food items.
9. Delivery Details Form: Collects the customer's name, phone number, and delivery address.
10. Form Validation: Checks required fields and validates the 10-digit phone number.
11. Place Order Button: Displays a confirmation message for the demo order.
12. Responsive Design: Adjusts the layout for mobile phones and computers.
13. Hover Effects: Adds visual effects to buttons, navigation links, and food cards.
14. Attractive Design: Uses food images, colors, cards, and shadows to improve the appearance.
15. Contact and Footer Section: Displays copyright information and a footer message.

Output:

3.User Registration and Login Interface Website

Problem Statement:

Create registration, login, password recovery, and profile setup forms. Use labels, password fields, HTML validation attributes, and CSS focus/error states.

Objective:

To create a simple accessible user interface and demonstrate basic client-side form validation

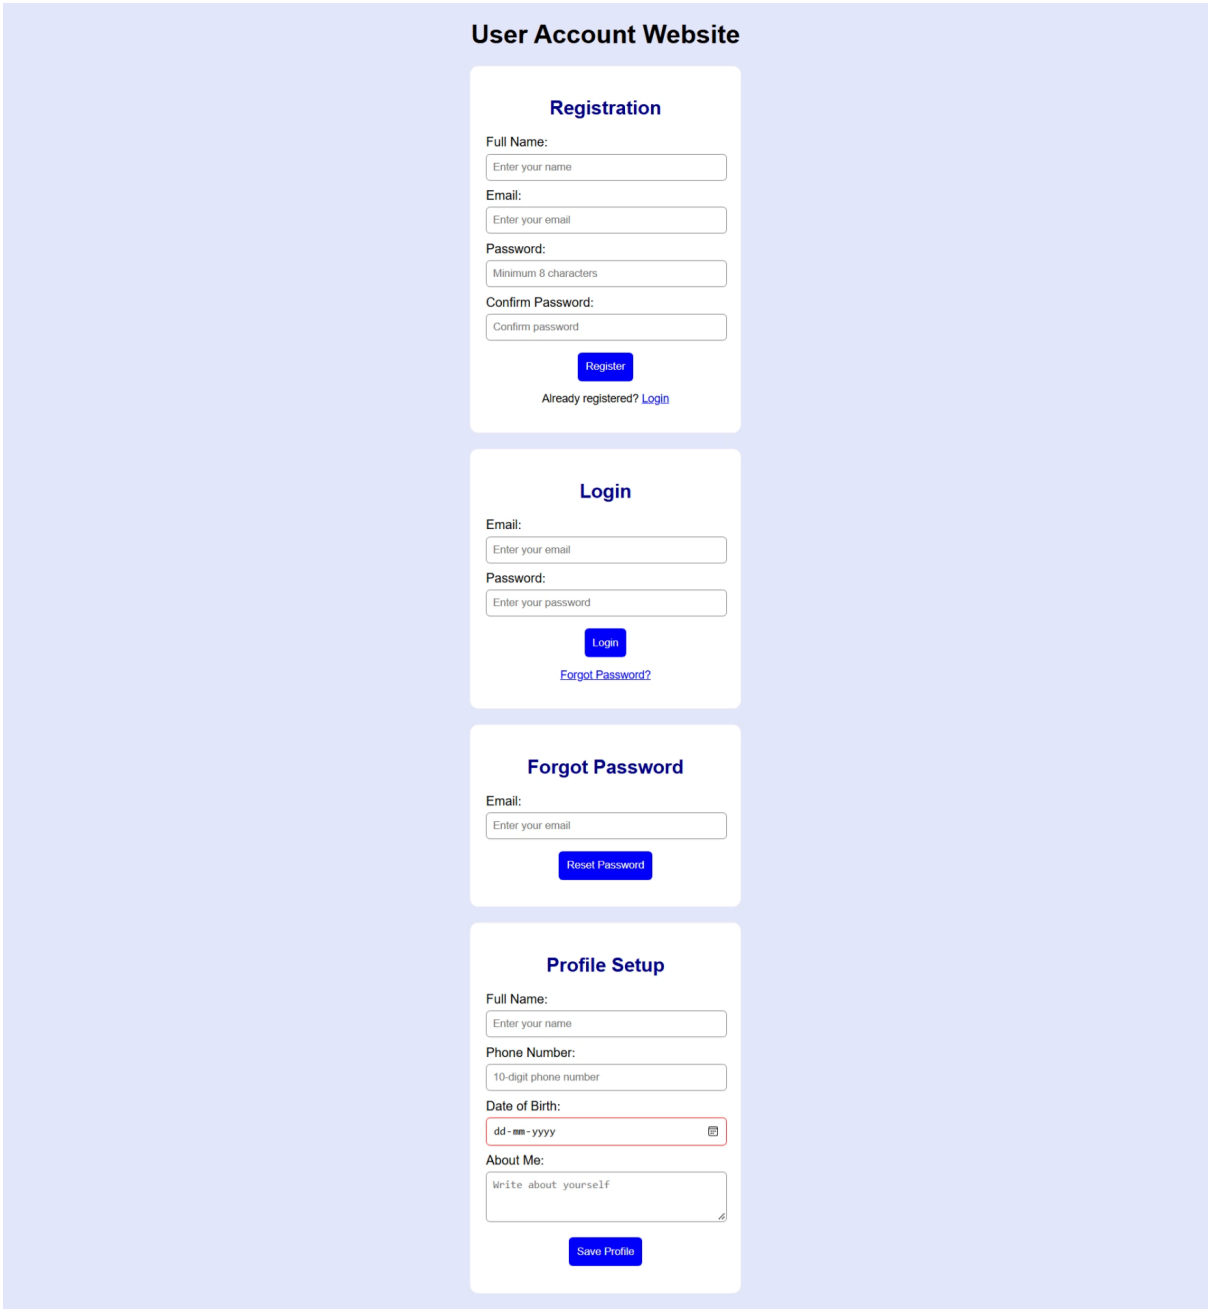

Applications:

1. Online Food Ordering: Allows customers to select and order food through a website.
2. Restaurant Promotion: Helps restaurants display their food items and prices.
3. Home Delivery: Allows customers to provide their address for food delivery.
4. Time Saving: Reduces the time needed to visit restaurants and order food.
5. Menu Browsing: Helps customers explore different food items in one place.
6. Easy Order Management: Helps customers manage their selected food items before placing an order.
7. Customer Convenience: Allows customers to order food from home or other locations.
8. Food Business Growth: Helps restaurants reach more customers through online services.

Features:

1. Home Page: Displays the website name, welcome message, and Order Now button.
2. Navigation Bar: Provides links to Home, Food Menu, My Cart, and Contact sections.
3. Food Menu: Displays food items such as pizza, burgers, sushi, and noodles.
4. Food Images: Shows pictures of food items to help customers choose.
5. Price Display: Shows the price of each food item in rupees.
6. Add to Cart: Allows customers to add food items to their shopping cart.
7. Quantity Controls: Allows customers to increase or decrease item quantities.
8. Automatic Total Calculation: Calculates the total cost of selected food items.
9. Delivery Details Form: Collects the customer's name, phone number, and delivery address.
10. Form Validation: Checks required fields and validates the 10-digit phone number.
11. Place Order Button: Displays a confirmation message for the demo order.
12. Responsive Design: Adjusts the layout for mobile phones and computers.
13. Hover Effects: Adds visual effects to buttons, navigation links, and food cards.
14. Attractive Design: Uses food images, colors, cards, and shadows to improve the appearance.
15. Contact and Footer Section: Displays copyright information and a footer message.
